Dear Amazon Hiring Manager,

I am writing to express my strong interest in a Software Engineering role at Amazon, motivated by the company's mission to innovate and deliver unmatched customer experiences. My academic and professional background aligns with Amazon's core principles-particularly Customer Obsession, Invent and Simplify, and Delivering Results-which are paramount to fulfilling the company's mission.

Firstly, my experiences as a Software Engineer Intern at HrHouz and as a Software Engineer at Skygeni reflect a keen ability to impact real-world applications positively. At HrHouz, I led the development of an applicant ranking service that enhanced resume matching accuracy, showcasing my capacity to obsess over customer needs and ensuring their expectations are exceeded through innovation and high-quality service.

Secondly, my strong computer science fundamentals are well established through my studies at UC Berkeley, where I have immersed myself in database systems, computer security, and algorithm courses. Coupled with practical experiences such as improving warehouse systems at Sayurbox using TypeScript and React, I have maintained a bias for action, consistently leveraging my technical skills to create efficient, user-friendly software solutions.

Lastly, my startup experience has honed my ability to think big and operate efficiently in dynamic environments. As a Head Teaching Assistant for CS61A, I have not only demonstrated leadership but also a commitment to learning and curiosity by managing and delivering a robust educational platform to over 1,000 students. This experience underscores my readiness to bring an entrepreneurial spirit to Amazon, ensuring my contributions fuel the company's innovative culture.

Thank you for considering my application. I look forward to the opportunity to discuss how I can further add value to Amazon.

Sincerely,

Ronald Arifin
