Dear Build Out Hiring Team,

I am thrilled to apply for a software engineering position at Build Out, where innovation and cutting-edge technology drive impactful solutions. As a software engineering intern at HrHouz and engaged leader at UC Berkeley, I have honed skills that align perfectly with your mission. My experience in development and optimization, particularly in creating an applicant ranking service and streamlining data processes using Python and Docker, has prepared me to contribute meaningfully right from the start.

Studying Electrical Engineering and Computer Science at UC Berkeley and leading student tech initiatives has been integral to my development. I spearheaded projects in cloud computing and mentored peers, echoing Build Out_s commitment to uninterrupted learning and fostering talent within a dynamic tech environment. Notably, my winning project at the Stanford Treehacks hackathon, which enhanced student retention through AI, reflects my passion for blending innovation with practical solutions, a philosophy I admire at Build Out.

I am drawn to Build Out not only for its technical endeavors but for its culture of collaboration and continuous improvement. My tenure as Head Teaching Assistant at UC Berkeley has instilled a robust capability for teamwork and leadership. I look forward to bringing these qualities to Build Out, integrating diverse perspectives to drive robust solutions and further amplifying a culture of excellence and efficiency.

I am enthusiastic about the opportunity to discuss how my background, education, and skills will be a perfect fit for the innovative and collaborative environment at Build Out. Thank you for considering my application. I look forward to contributing to the team with dedication and creativity.

Best regards,

Ronald Arifin
